

SQL ASSIGNMENT:-

Create EmployeeDetail Table and insert records in the table as it is Mentioned in the below image and Solve questions based upon it

EmployeeDetail table

EmployeeID	FirstName	LastName	Salary	JoiningDate	Department	Gender
1	Vikas	Ahlawat	600000	2/12/2013 11:16	IT	Male
2	nikita	Jain	530000	2/14/2013 11:16	HR	Female
3	Ashish	Kumar	1000000	2/14/2013 11:16	IT	Male
4	Nikhil	Sharma	480000	2/15/2013 11:16	HR	Male
5	anish	kadian	500000	2/16/2013 11:16	Paroll	Male

1. Write a query to get all employee detail from "EmployeeDetail" table
2. Write a query to get only "FirstName" column from "EmployeeDetail" table
3. Write a query to get FirstName in upper case as "First Name".
4. Write a query to get FirstName in upper case as "First Name".
5. Write a query for combine FirstName and LastName and display it as "Name" (also include white space between first name & last name)
 - i. Select employee detail whose name is "Vikas"
 - ii. Get all employee detail from EmployeeDetail table whose "FirstName" start with latter 'a'.

- iii. Get all employee detail from EmployeeDetail table whose "FirstName" start with latter 'a'.
 - iv. Get all employee details from EmployeeDetail table whose "FirstName" end with 'h'
6. Get all employee detail from EmployeeDetail table whose "FirstName" start with any single character between 'a-p'
 7. Get all employee detail from EmployeeDetail table whose "FirstName" not start with any single character between 'a-p'
 8. Get all employee detail from EmployeeDetail table whose "Gender" end with 'le' and contain 4 letters. The Underscore(_) Wildcard Character represents any single character
 9. Get all employee detail from EmployeeDetail table whose "FirstName" start with 'A' and contain 5 letters
 10. Get all employee detail from EmployeeDetail table whose "FirstName" containing '%'. ex:-"Vik%as".
 11. Get all unique "Department" from EmployeeDetail table
 12. Get the highest "Salary" from EmployeeDetail table.
 13. Get the lowest "Salary" from EmployeeDetail table
 14. Show "JoiningDate" in "dd mmm yyyy" format, ex- "15 Feb 2013"
 15. Show "JoiningDate" in "yyyy/mm/dd" format, ex- "2013/02/15"
 16. Show only time part of the "JoiningDate"
 17. Get only Year part of "JoiningDate"

18. Get only Month part of "JoiningDate"
19. Get system date
20. Get UTC date.
 - a. Get the first name, current date, joiningdate and diff between current date and joining date in months.
21. Get the first name, current date, joiningdate and diff between current date and joining date in days.
22. Get all employee details from EmployeeDetail table whose joining year is 2013
23. Get all employee details from EmployeeDetail table whose joining month is Jan(1)
24. Get all employee details from EmployeeDetail table whose joining month is Jan(1)
25. Get how many employee exist in "EmployeeDetail" table
26. Select only one/top 1 record from "EmployeeDetail" table
27. Select all employee detail with First name "Vikas", "Ashish", and "Nikhil".
28. Select all employee detail with First name not in "Vikas", "Ashish", and "Nikhil"
29. Select first name from "EmployeeDetail" table after removing white spaces from right side
30. Select first name from "EmployeeDetail" table after removing white spaces from left side
31. Display first name and Gender as M/F. (if male then M, if Female then F)

32. Select first name from "EmployeeDetail" table prefixed with "Hello"
33. Get employee details from "EmployeeDetail" table whose Salary greater than 600000
34. Get employee details from "EmployeeDetail" table whose Salary less than 700000
35. Get employee details from "EmployeeDetail" table whose Salary between 500000 than 600000

Advanced Queries (For Experienced Candidates)

EmployeeDetail table

EmployeeID	FirstName	LastName	Salary	JoiningDate	Department	Gender
1	Vikas	Ahlawat	600000	2/12/2013 11:16	IT	Male
2	nikita	Jain	530000	2/14/2013 11:16	HR	Female
3	Ashish	Kumar	1000000	2/14/2013 11:16	IT	Male
4	Nikhil	Sharma	480000	2/15/2013 11:16	HR	Male
5	anish	kadian	500000	2/16/2013 11:16	Paroll	Male

Create ProjectDetail Table and insert records in the table as it is Mentioned in the below image and Solve questions based upon it

ProjectDetail table

	ProjectDetailID	EmployeeDetailID	ProjectName
1	1	1	Task Track
2	2	1	CLP
3	3	1	Survey Managment
4	4	2	HR Managment
5	5	3	Task Track
6	6	3	GRS
7	7	3	DDS
8	8	4	HR Managment
9	9	6	GL Managment

Solve the below Queries as this part is optional you can ignore also as these queries are for those who have some relevant amount of experience in SQL

1. Give records of ProjectDetail table
2. Write the query to get the department and department wise total(sum) salary from "EmployeeDetail" table.
3. Write the query to get the department and department wise total(sum) salary, display it in ascending order according to salary.
4. Write the query to get the department and department wise total(sum) salary, display it in descending order according to salary
5. Write the query to get the department, total no. of departments, total(sum) salary with respect to department from "EmployeeDetail" table.
6. Get department wise average salary from "EmployeeDetail" table order by salary ascending
7. Get department wise maximum salary from "EmployeeDetail" table order by salary ascending
8. Get department wise minimum salary from "EmployeeDetail" table order by salary ascending.
9. Get department wise minimum salary from "EmployeeDetail" table order by salary ascending
10. Join both the table that is Employee and ProjectDetail based on some common paramter
11. Get employee name, project name order by firstname from "EmployeeDetail" and "ProjectDetail" for those employee which have assigned project already.

12. Get employee name, project name order by firstname from "EmployeeDetail" and "ProjectDetail" for all employee even they have not assigned project.
13. Get employee name, project name order by firstname from "EmployeeDetail" and "ProjectDetail" for all employee if project is not assigned then display "-No Project Assigned"
14. Get all project name even they have not matching any employeeid, in left table, order by firstname from "EmployeeDetail" and "ProjectDetail"
15. Get complete record (employeename, project name) from both tables ([EmployeeDetail],[ProjectDetail]), if no match found in any table then show NULL
16. Get complete record (employeename, project name) from both tables ([EmployeeDetail],[ProjectDetail]), if no match found in any table then show NULL
17. Get complete record (employeename, project name) from both tables ([EmployeeDetail],[ProjectDetail]), if no match found in any table then show NULL
18. Write down the query to fetch EmployeeName & Project who has assign more than one project
19. Write down the query to fetch ProjectName on which more than one employee are working along with EmployeeName

20. Apply Cross Join in Both the tables
